Full product description

Extralink Car Holder S5 - Modernity and Comfort in Your Car

Extralink Car Mount S5 Sensor Inductive is the ideal solution for anyone who values comfort and safety while driving. Thanks to Qi wireless charging technology and automatic arms, your smartphone will always be securely attached and quickly charged, without the need to plug in cables.

Automatic Arms and Convenient Operation

Thanks to **the built-in inductive sensor**, the arms of the holder open automatically when you approach your phone, and once it is placed in the holder - they close, providing a secure grip. This is an incredibly convenient solution that allows one-handed operation. You no longer need to manipulate the phone, just one movement is enough to fix the device in the holder.

Wireless Inductive Charging

The Extralink S5 mount offers Qi **wireless charging** with **up to 15W** of power, allowing you to charge your phone quickly and efficiently. This way, you don't have to worry about battery levels during long trips. Just place your phone in the holder and charging will start automatically.

Stable Mounting on Ventilation Grille

The mount is designed to be mounted on the air vents, ensuring that the phone is convenient and accessible within sight, without restricting visibility. **The magnetic mounting clip** ensures stability even when driving on uneven roads, which protects your device from falling out. This will keep your phone safe in any situation.

Electric Arm Clamp System

One of the most important features of this holder is the electric arm clamping system, which automatically adjusts the clamping force to the size of the phone. Thanks to this, the holder not only precisely holds the phone, but also keeps it in place even when driving on the hills. Now **you don't have to worry about your phone "jumping" out of the holder** - it's safe regardless of road conditions.
