Price: **699.99 zł** gross / 569.10 zł net

Manufacturer: EXTRALINK

Referention number: DNXGFOLRIRMPK

Product features

Antenna type	Omni-directional antenna
Antenna gain level (max)	6 gain
Power source type	PoE
Antenna connector type	SMA

Full product description

Extralink ELTEBOX, a directional LTE antenna

The problem may be poor LTE antenna in the apartment or house. Most of the current offerings of suppliers are mostly small LTE modems for installation inside the house or office. Such a solution is currently insufficient, because the signal strength of such devices is too low. Choose **Extralink Eltebox** and get rid of the problems.

Features:

- Plug & Play
- Compact external solution
- Two internal LTE directional antennas with increased gain
- Noise reduction
- Two external omnidirectional Wi-Fi antennas (mounted at the bottom of the case)
- Up to 3 RJ45 ports
- Mounting system, made of high strength material

LTE or Wi-Fi? Or maybe we can combine it into one.

With the solution comes the ELTEBOX, which is a compact solution dedicated to professional outdoor applications. The LTE directional antenna has a bracket for mounting Teltonika RUT240 router. In ergonomic, waterproof Eltebox housing there are two LTE directional antennas and two 2.4/5GHz dual band omnidirectional Wi-Fi antennas that can be connected to Teltonika RUT240. The power supply is not needed because one RJ45 connector comes out of the housing, which is also a power source for the radio (additional RJ45 connectors can be added optionally).
