Full product description

Extralink Fairy 24 fibers

The dashboard is made of metal, which provides better protection against unauthorized access than plastic solutions. It is designed for indoor use, it is mounted on the wall.

The cabinet is divided into two parts - in the first one there are trays where you can place the weld covers and in the second one there is a commutation field where you can place up to 24 SC simplex adapters.

The cables are inserted through culverts located on the ceiling and cabinet floor. In total, up to 4 casing tubes with fiber optic cables can be inserted.
