Price: **59.90 zł** gross / 48.70 zł net

Manufacturer: EXTRALINK

Referention number: DNXGGOONERMMLI

Information:

The Extralink Home smart bathroom scale helps you regularly monitor body weight and track progress thanks to Bluetooth connectivity and compatibility with a mobile app. It enables analysis of parameters such as BMI, body fat percentage and muscle mass, while measurement history makes it easier to assess the effects of diet and physical activity. The scale measures within a range of 5 to 180 kg, has a clear LCD display and an elegant platform that is easy to keep clean. It is a practical support for healthy habits and daily body composition monitoring.

Full product description

Body weight control

The Extralink Home smart bathroom scale helps you regularly monitor your body weight and observe changes over time. Bluetooth connectivity enables results to be sent to a mobile app, allowing the user to conveniently analyse their progress. The device is ideal for supporting physical activity, diet and everyday habits.

Support for healthy habits

Extralink Home helps you systematically track results and observe progress over a longer period. Combining scale measurements with data history in the app makes it easier to assess the impact of physical activity, diet and everyday habits. It is a practical solution for people who want to consciously monitor body weight and composition.

Analysis in the app

The mobile app allows you to analyse body weight and additional parameters such as BMI, body fat percentage and muscle mass. Saving successive measurements helps you notice trends and assess changes occurring while following a diet or training plan. Body composition readings are indicative and do not replace medical examinations.

Range from 5 to 180 kg

The scale allows body weight measurements in the range from 5 to 180 kg. Regular weighing helps you observe the direction of changes and compare the results obtained. For the measurement to be carried out correctly, the device should be placed on a hard, level surface and you should stand on it barefoot.

Clear LCD display

The built-in LCD display allows you to read the weighing result directly without using a smartphone. The black platform with four metal measuring pads has a simple design that suits various bathroom interiors. The smooth surface also makes the device easy to keep clean.

Bluetooth connectivity

The Bluetooth module enables the scale to connect to a smartphone or tablet. Results can be sent to a compatible mobile app, reducing the need to record measurements manually. The collected information remains available on the mobile device and can be compared at any time.
