Manufacturer: EXTRALINK

Referention number: DNXGGMHSFRMMJQ

Information:

Extralink Home Avenli is an inflatable, round jacuzzi for up to 3 people, ideal for the garden or terrace. Equipped with an external control panel, it allows convenient adjustment of temperature, filtration and bubble massage. 105 air jets provide a relaxing massage, and the built-in heater warms the water to 40°C at a rate of 1.5-2.5°C per hour. The included thermal cover helps retain heat and protects the water from dirt. A capacity of 686 litres, comfortable inflatable walls and easy assembly make it a practical solution for relaxing at home.

Full product description

Control panel

An external module with a digital panel allows convenient control of the most important functions of the Extralink Home Avenli jacuzzi. From it, you can adjust the water temperature and activate filtration and bubble massage. Clear button labels make it easy to set the desired settings before starting your bath.

Relaxation for 3 people

The round jacuzzi has been designed for simultaneous use by up to three people. It has an external diameter of 165 cm, an internal diameter of 125 cm and a height of 70 cm. A capacity of 686 litres makes it possible to prepare a space for relaxing together in the garden or on a suitably prepared patio.

Thermal cover

The included cover helps reduce heat loss and prevents leaves and other debris from getting into the water. Straps with buckles allow it to be attached to the jacuzzi walls. The cover should be put on after bathing, and before entering the water it must be removed completely.

Inflatable construction

The inflatable walls provide a comfortable backrest while bathing, and the round shape makes it easy to place the jacuzzi in the chosen spot. The tub should be set up on a level, stable surface free of sharp objects. After the season ends, the structure can be emptied, thoroughly dried, folded and stored in a dry room.

105 air jets

The massage system uses 105 air jets arranged around the bottom of the tub. The bubbles produced set the water in motion and help you relax after an active day. The massage function can be activated using the panel located on the external control module.

Warm evening bath

The built-in heating system allows the water to be heated to 40°C, and the declared heating rate is from 1.5 to 2.5°C per hour. This makes it possible to prepare a warm bath even on a cooler evening. Heating time depends, among other things, on the initial water temperature and ambient conditions.
