We present test of EPON / ONU EXTRALINK device called **LUNA**.

The testing procedure consists of the following tests:

- performance - tcp / udp, the number of packets per second;
- web interface;

Description of testing station.

The tests were performed using the following equipment:

MikroTik
CCR-1016-12s-1s+
RM

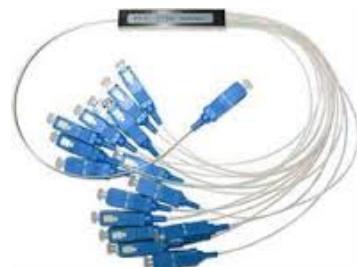

EXTRALINK SFP RJ45
1.25G 100M
(1000BASE-T)

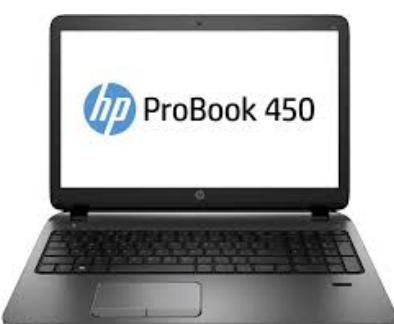

BDCOM P3310
OLT

EXTRALINK 1:16 PLC
SPLITTER SC/UPC
900UM 1.5M

LAPTOP HP
PROBOOK 450

LENOVO Z70

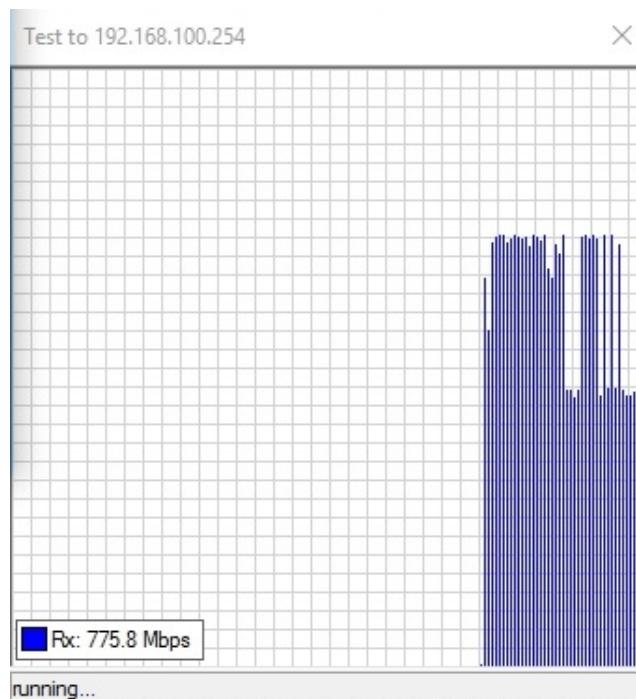

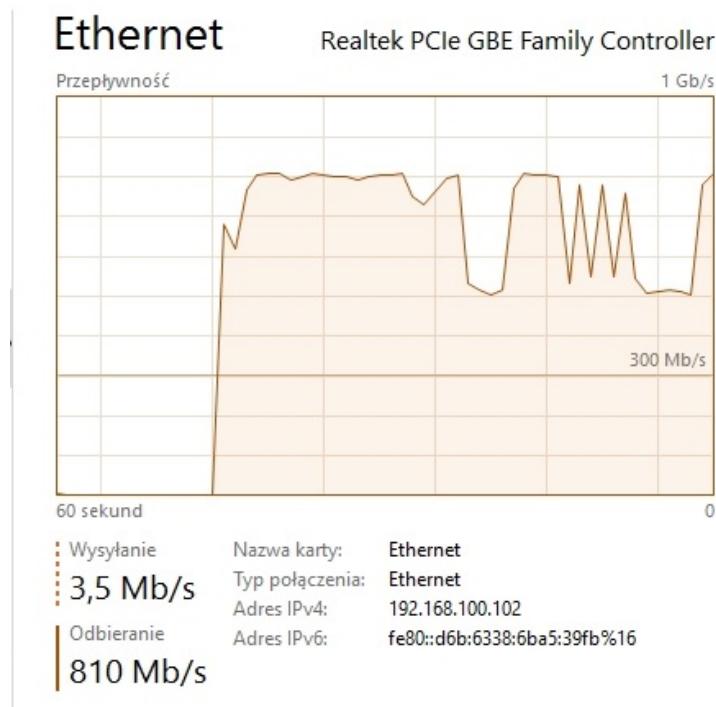

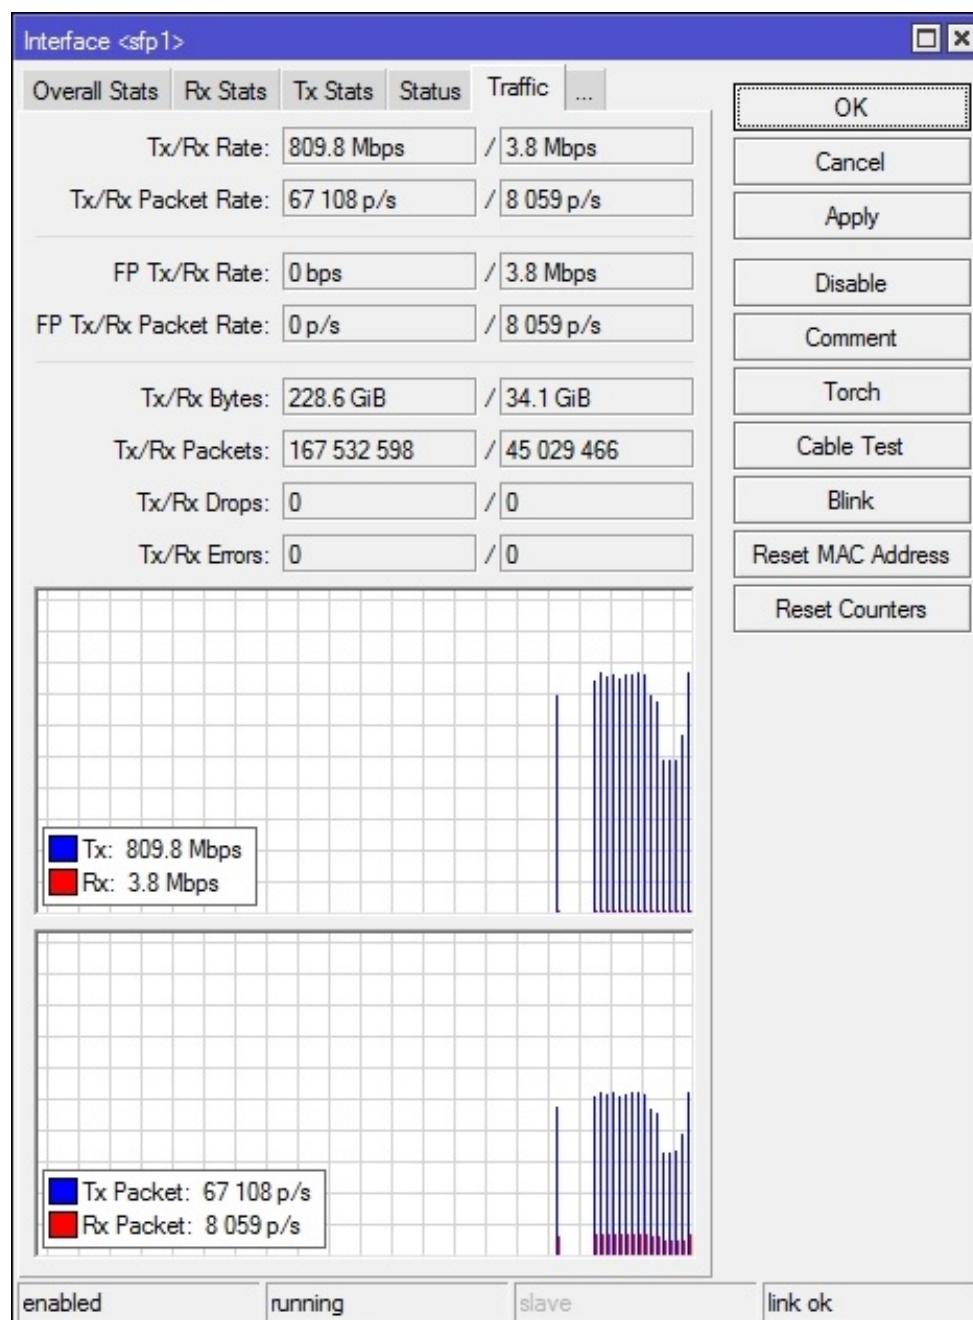

Performance.

To check the performance we used: **EXTRALINK LUNA EPON/1GE**, built-in mechanism MikroTik Bandwidth Test v1.0 and CCR-1016-12S-1S+.

The second test was performed between two laptops using applications iperf, actually graphic version Jperf, which works on the Java platform.

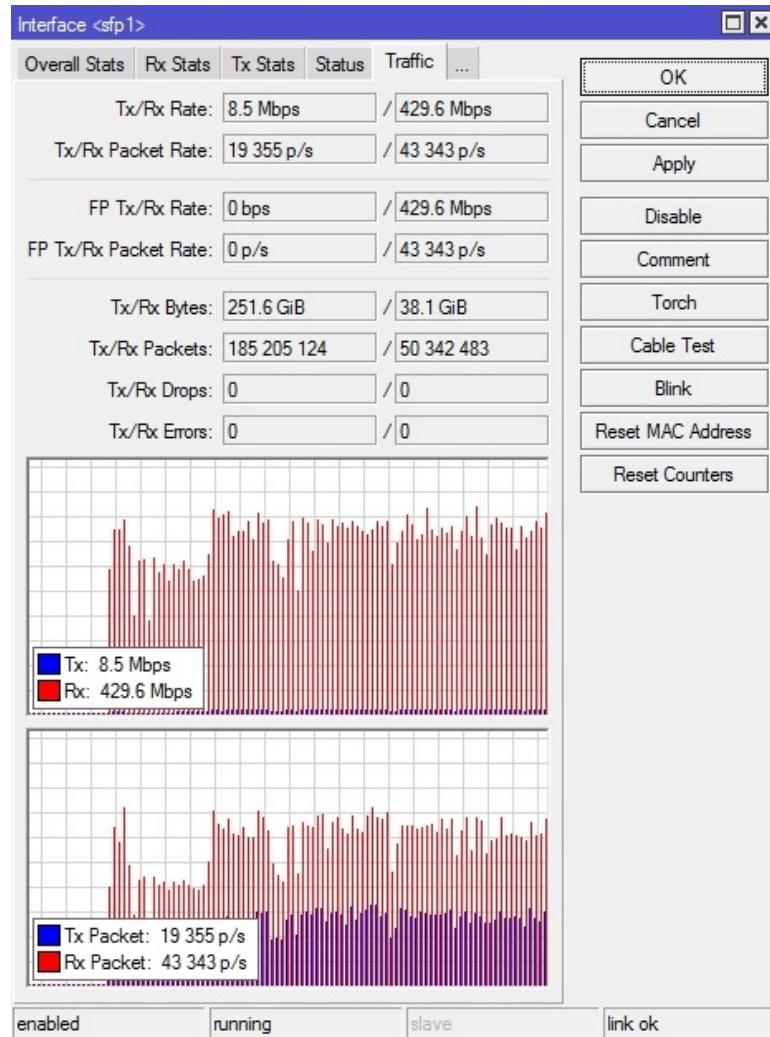

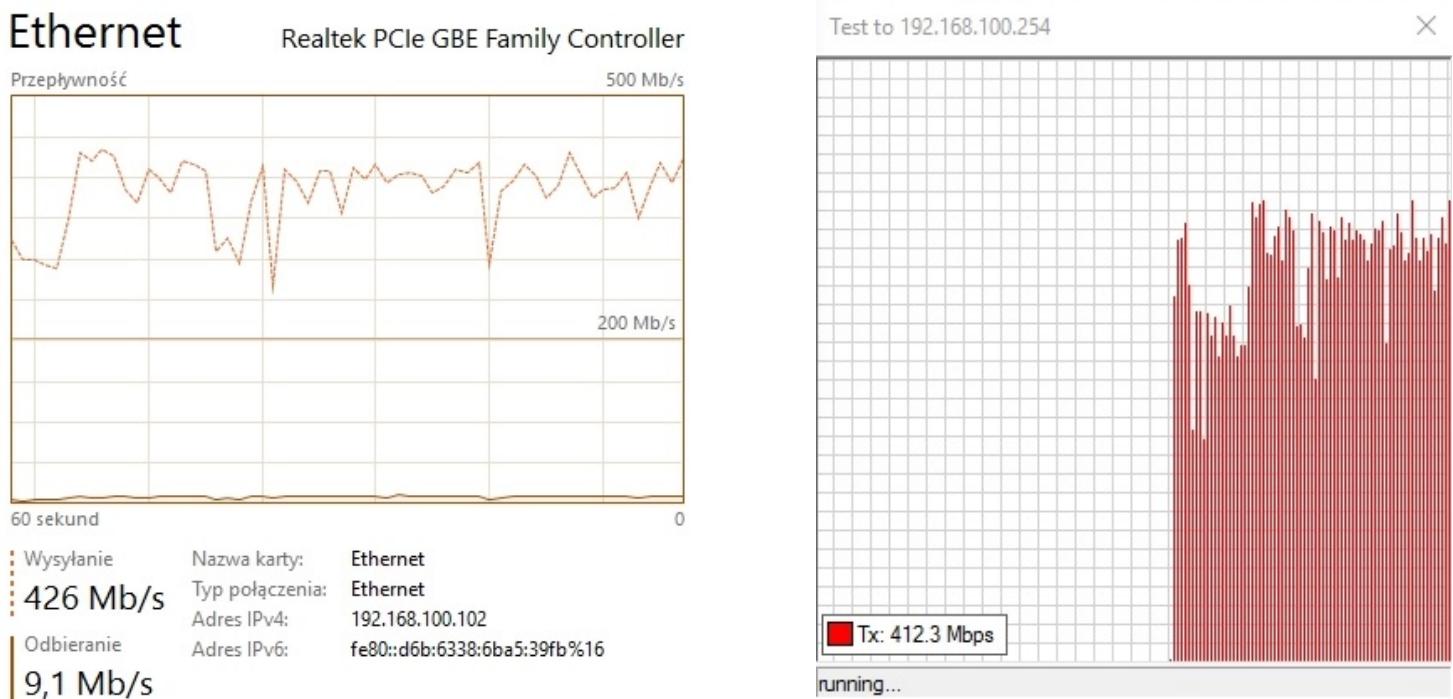

Mikrotik BTest TCP receive

As you can see we obtained throughput of 800 Mbps with over 67 100 p/s.
