

Cisco Business Wireless Access Points and Mesh Extenders

From connectivity to cloud applications, networking plays a crucial role in every business journey. Reliability, security, and affordability continue to be top of mind, while ongoing management and operations add complexity that exhausts time and resources.

Cisco® Business Wireless access points and mesh extenders offer a simple-to-deploy solution designed to empower small and medium-sized businesses to connect and collaborate like never before. Built with reliability and flexibility in mind, the Cisco Business Wireless access points and mesh extenders provide industry-leading wireless performance that meets your evolving business requirements. An intuitive mobile application establishes a secure network instantaneously. Extensive customer service and a comprehensive warranty help ensure business continuity.

Specifically designed for small and medium-sized networks, Cisco Business wireless access points and mesh extenders deliver enterprise performance via the 802.11ac Wave 2 standard. They offer a data rate of up to 867 Mbps on the 5-GHz radio, far exceeding the data rates offered by access points that support other legacy standards.

Cisco Business Wireless access points and mesh extenders are managed by the Cisco Business Mobile app, an intuitive client application that simplifies traditional challenges associated with wireless network deployment, right from your mobile device. You can extend your network by adding new mesh extenders and automating wireless network activation in minutes. A robust management capability dynamically changes network configuration such as enabling secured guest access. Network usage, traffic patterns, and network throughput can be closely monitored, providing a real-time snapshot; this not only provides peace of mind, it virtually ensures optimal user experience. The Cisco Business Mobile app is available for iPhone, iPad, and Android devices.

The Cisco Business wireless access points and mesh extenders are simple, secure, and flexible—the three pillars of network excellence—strengthening the network by providing the best wireless experience without compromise.

- **Simple:** Cisco Business Mobile app simplifies network operations, thereby freeing up valuable time and resources for growth and profitability. Ease of integration enhances network automation for Managed Service Providers (MSPs).
- **Secure:** Advanced security protocols provides a solid security foundation. Commercially proven solution lowers the risk associated with network deployments, while extensive customer support helps ensure business continuity.
- **Flexible:** Innovative product portfolio provides the flexibility to adapt a rapidly evolving business environment for small businesses and MSPs alike. Affordable pricing models complement your business needs.

Cisco Business Support Service

This optional subscription-based, device-level service offers affordable, 3-year peace-of-mind coverage. It helps you protect your investment and derive maximum value from Cisco Business products. Delivered by Cisco and backed by your trusted partner, this comprehensive service includes software updates, extended access to the Cisco Small Business Support Center, and expedited hardware replacement, should it be required.
