Manufacturer: WANBO

Referention number: DNXXGKPIQFRMMMP

Information:

Wanbo X7 Pro Max é um projetor multimídia doméstico com resolução nativa Full HD 1080P, brilho de 1500 ANSI lumenów e imagem de até 300 cali, garantindo uma projeção nítida e detalhada mesmo com luz parcial. O suporte a HDR10, contraste 3500:1 e a tecnologia MEMC melhoram a qualidade e a fluidez da imagem. O Google TV integrado com Android 14 dá acesso a aplicativos de streaming populares, e 2 GB RAM e 32 GB de memória ROM apoiam um funcionamento eficiente. O foco automático e a correção trapezoidal facilitam a configuração, enquanto os alto-falantes de 20 W com Dolby Audio e Wi-Fi, Bluetooth 5.0 e transmissão sem fio de imagem garantem conveniência e um centro de entretenimento completo em um único dispositivo.

Full product description

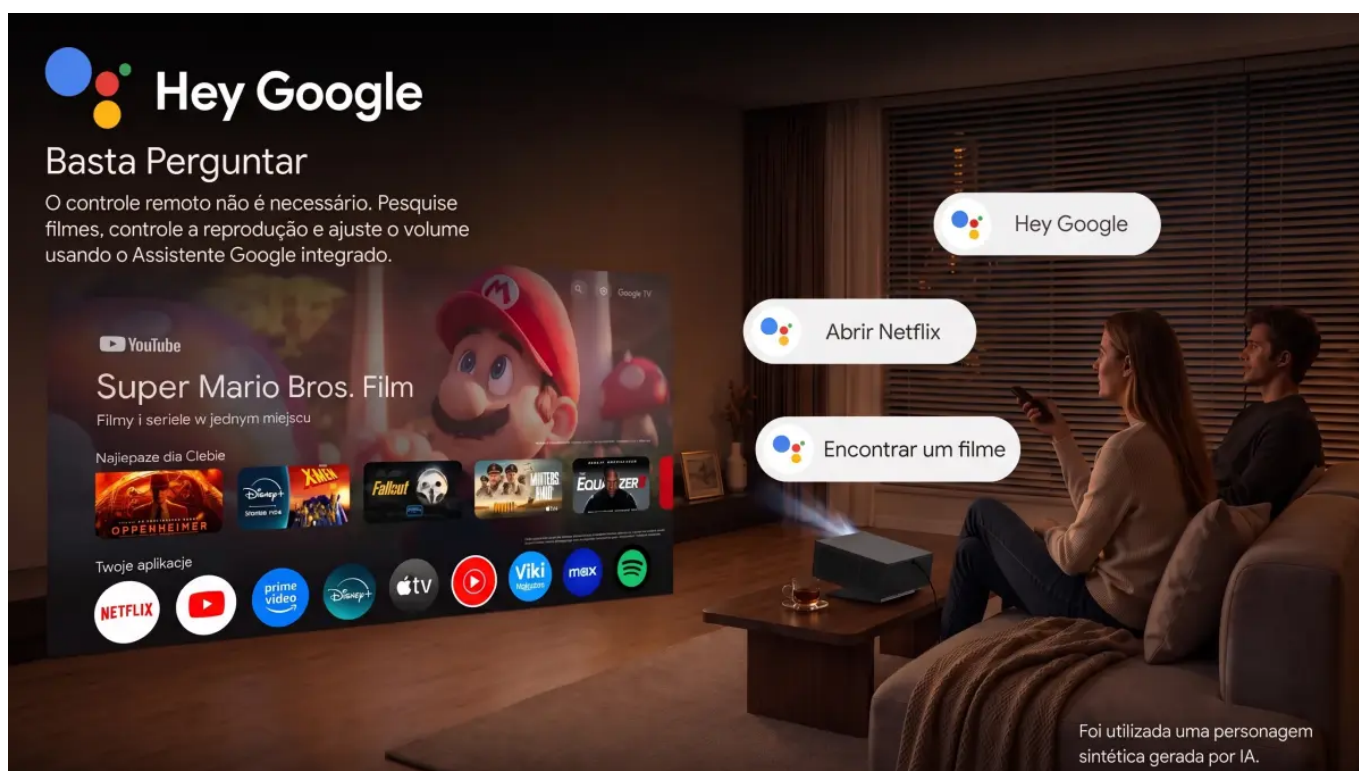

Wanbo X7 Pro Max - home cinema with Full HD image and intelligent Google TV system

Wanbo X7 Pro Max is a multimedia projector designed for people who want to create their own entertainment space at home. The device combines high image quality, smart system features, and solutions that make everyday use easier. Thanks to the native **Full HD 1080P** resolution, **1500 ANSI lumens** brightness, and the ability to display an image up to **300 inches**, the projector lets you watch movies, series, sports broadcasts, and other multimedia content on a large screen. The device's design has been prepared to work well both for everyday use in the living room and for special movie screenings.

Full HD 1080P image and 1500 ANSI lumens brightness for clear projection

The **Wanbo X7 Pro Max** projector uses a native **1920 × 1080 pixels (Full HD)** resolution, thanks to which the displayed image retains proper detail and sharpness. The **ANSI lumens** parameter defines the projector's actual brightness according to a specific measurement standard. The value of **1500 ANSI lumens** helps produce a readable image and maintain detail visibility even when the room is not completely darkened. In practice, this means greater flexibility when choosing a projection location – the projector can be used not only in the evening, but also during the day with limited ambient light.

HDR10 and 3500:1 contrast - more detail in bright and dark scenes

Wanbo X7 Pro Max supports **HDR10** technology, which increases the range of displayed brightness levels. As a result, the projector can better reproduce differences between very bright and dark parts of the image. When watching movies, this translates into more detailed night scenes, better visible elements in shadows, and more natural reproduction of bright areas. In addition, the **3500:1** contrast ratio helps maintain clear tonal transitions and improves the viewing experience of films and photos.

MEMC technology - smoother image during dynamic scenes

The projector is equipped with **MEMC (Motion Estimation, Motion Compensation)** technology, a solution designed to improve motion smoothness by analyzing changes between consecutive frames. This function helps reduce blur during fast shots and makes dynamic content more comfortable to watch. It is especially useful when watching **sports events**, action movies, and playing games, where fast-moving objects require efficient motion rendering.

Google TV and Android 14 - a home entertainment hub in one device

Wanbo X7 Pro Max has a built-in **Google TV** system, which allows access to apps and streaming services without the need to connect an additional device. Users can use platforms such as **Netflix, YouTube, and Disney+**, as well as install more apps available in the **Google Play** store. The **Android 14** system provides intuitive interface operation and convenient access to projector settings and functions. Thanks to this, the device can serve as a complete multimedia center at home.

Ouro Obsidiana

Design de Classe Premium

Fazendo referência ao estilo clássico da série X5 Pro, o projetor destaca-se pelo seu acabamento luxuoso na tonalidade de ouro obsidiana e pelo seu revestimento decorativo fabricado com precisão.

Efficient components and convenient app handling

Smooth operation of multimedia functions is ensured by the projector's appropriate hardware configuration. **Wanbo X7 Pro Max** is equipped with **2 GB of RAM** and **32 GB of internal ROM memory**, which enables efficient system operation, app installation, and storage of user settings. The internal memory allows use of the advanced features of the **Google TV** system, while the appropriate amount of RAM supports comfortable menu navigation and access to available functions. With this configuration, the projector can operate as a standalone entertainment device without the need for additional multimedia accessories.

Resolução nativa 1080p, contraste 3500:1 e HDR10 para clareza realista e riqueza de detalhes nas partes claras e escuras da imagem.

Automatic focus and keystone correction - quick image setup

The **Wanbo X7 Pro Max** projector is equipped with features that make everyday setup easier. **Automatic focus adjustment** allows you to quickly achieve a sharp image without manual lens adjustment. Meanwhile, **automatic keystone correction** helps adjust the shape of the projected image when the projector is not positioned directly in front of the projection surface. Thanks to these solutions, users can more easily prepare the device for use in different places, both during permanent installation and occasional use.

Dolby Audio and 20 W speakers – fuller viewing experience

Wanbo X7 Pro Max has a built-in audio system consisting of two speakers with **10 W each**. Support for **Dolby Audio** is responsible for processing sound in a way that delivers a more spacious and clear audio experience. In practice, this means more audible dialogue, more detailed sound effects, and more enjoyable music playback while using the projector. Thanks to the integrated audio system, the device can serve as a complete entertainment center without the immediate need to connect external speakers.

Wi-Fi, Bluetooth, and wireless image casting

The projector offers broad communication capabilities thanks to support for **Wi-Fi 2.4 GHz and 5 GHz**. Dual-band wireless connectivity enables convenient use of internet services and apps available in the system. The **Bluetooth 5.0** module allows connection of compatible devices such as wireless speakers or other accessories. The wireless image casting function enables content to be displayed from a smartphone, so users can quickly show photos, videos, presentations, or sports broadcasts on a large screen.

Google Cast

Conectividade Sem Esforço

Transfira o seu conteúdo favorito através do Google Cast. Desfrute de uma transmissão suave graças ao Wi-Fi de banda dupla e à ligação Bluetooth 5.0 estável.
