Information:

MOULD KING 12044 Flying Scotsman — это расширенный конструкторский набор из 1766 элементов, представляющий один из самых известных паровозов в истории. Модель точно воспроизводит зелено-черный силуэт паровоза с тендером, кабиной машиниста, большими колесами и множеством деталей, вдохновленных оригиналом. Реалистичная конструкция отлично подойдет как коллекционная модель, украшение или элемент железнодорожного макета. Набор развивает творческие способности и моторику, а после сборки впечатляет размерами ок. 65,6 x 14,7 x 20,9 см. Это отличный подарок для любителей железных дорог, техники и моделирования.

Full product description

MOULD KING 12044 Flying Scotsman - iconic steam locomotive with 1766 elements

MOULD KING 12044 Flying Scotsman Steam Locomotive Building Set is an extensive construction set depicting one of the most recognizable steam locomotives in railway history. The model consists of 1766 elements that allow you to recreate the characteristic green-and-black silhouette of the locomotive together with the tender, driver's cab, large wheels, and details inspired by the original design.

Detailed model for railway enthusiasts

The Flying Scotsman design was created for people who appreciate model making and collecting unique technical models. The set recreates many characteristic elements of the real steam locomotive, such as the elongated boiler, chimney, driving wheels, valve gear, and a separate tender for coal and water. Once assembled, the model can serve as a decorative piece or become part of a railway layout.

Realistic construction with a characteristic tender

The locomotive has been equipped with a separate tender, which complements the classic appearance of the steam engine and emphasizes its railway character. The green color scheme with black elements gives the model an elegant look, and the numerous construction details make it interesting from every angle. The assembled locomotive can be an eye-catching decoration for a shelf, desk, or model collection.

Extensive construction set with 1766 elements

The large number of elements allows for a detailed recreation of the locomotive body and provides a satisfying building process. The individual parts form a coherent structure that will interest both people just starting their adventure with brick models and experienced builders. The set encourages creativity and manual skills during assembly.

Collector's model for a unique display

Flying Scotsman is an option for people who want to create their own collection of railway models or are looking for an impressive display piece. Thanks to the classic steam locomotive form and a large number of details, the model attracts attention both in a home interior and on a railway layout. It can also be a great gift idea for enthusiasts of technology and railway history.

Refined construction details

The set allows you to examine many elements characteristic of classic steam locomotives. The visible wheels, front part of the boiler, driver's cab, and connection to the tender create a realistic silhouette of the vehicle. Every part of the structure has been designed to preserve the railway style and proportions of the model.

Model dimensions after assembly

After assembly, the model presents itself as a large railway construction measuring approximately 65.6 cm in length, 14.7 cm in width, and 20.9 cm in height. Thanks to these dimensions, the locomotive works well as a central element of a collection or as a decoration in a room. The included display base allows for stable placement of the finished model.

Specification

Parameter	Details
Brand	MOULD KING
Model	12044 Flying Scotsman Steam Locomotive
Number of elements	1766
Set type	Steam locomotive model made of construction bricks
Dimensions after assembly	Approximately 65.6 × 14.7 × 20.9 cm
